SECRET**MAJOR INTELLIGENCE OBJECTIVES****I. Communication Support Activity****A. 1966-1970**

- (1) To provide sufficient world wide base radio station capabilities including circuit redundancy, to permit the development of a decentralized telecommunications plan which minimizes the dependence on any single facility.
- (2) Increase the use of automated equipment in relay stations to speed the flow of traffic and reduce the workload impact of higher cable volumes.
- (3) Complete the conversion from 60 wpm to 100 wpm of the teletype network.
- (4) Requirements for data communications will be met with point-to-point voice quality circuits that are separate and apart from the on-line teletype network. Switching will be accomplished manually.
- (5) Install in the Langley building a circuit switch to handle the Washington area KY-3 voice secrecy network. This network will be integrated and inter-connected with the State Department, the White House and the Defense Department in the Washington area. Over and above this Washington area requirement a capability will be provided for CIA officials to use 25X1A the military and State overseas voice secrecy facilities.
- (6)
- (7) Expand the technical training program to maintain harmony with increased automation. Assess impact on man year loss for this program.
- (8) Keep modern the communications items in the Agency's strategic reserve of packaged and transportable radio stations.
- (9) Continue participation in the National Communications System (NCS), with participation being limited, generally, to locations where CIA has a requirement.

SECRET

B. 1971-1980

- (1) New cryptographic and terminal equipment will be introduced into the system to permit handling of either teletype or data communications.

25X

(2)

- (3) Convert the 100 wpm teletype circuits to voice quality using military, commercial and Agency circuitry. These circuits will operate into switches permitting their being switched for the exchange of data, secure voice and facsimile communications.
- (4) Continue the CIA communications role in the NCS to provide voice and record communications service to national interests, as well as CIA, at locations where CIA has an interest.
